³Morgan State University Water Specialist

AfCCI Workshop, February 4 - 5, 2013

Capacity-building: Enable the effective use of water management tools in the US and internationally

How do we build the capacity to impact decisions and society?

SERVIR: regional and in-country government stakeholders

Geographic Areas: US, East Africa, Mesoamerica, Hindu Kush Himalaya

DEVELOP: regional and US/state/local government stakeholders and future workforce

Geographic Areas: US, Colombia, Mexico, Nepal

Gulf of Mexico Initiative (GOMI): regional stakeholders

Geographic Areas: US, Mexico

Applied Remote SENSING Training (ARSET): regional and US/state/local government stakeholders

Geographic Areas: US, Colombia

Applied science research: Build water resource management tools

How do we use applied science to manage water resources?

Water Quality and Resources Monitoring

Drought Monitoring

Climate Impacts

Agriculture: Water Delivery and Irrigation

Flood Forecasting

Agriculture: Water Delivery and Irrigation

Snowpack Monitoring and Management

Flood Forecasting

Climate Impacts

Drought Monitoring

Basic science research: NASA Energy and Water Cycle Study

What processes drive the cycle of water and energy on Earth?

Soil Moisture Assessment (AMSR-E/SMOS/SMAP)

Change in Groundwater Storage (GRACE)

Water Quality Assessment

Precipitation Assessment (TRMM/GPM)

Evaporation Estimation (LDCM)

Snowpack and Melt Assessment (AMSR-E/MODIS)

Improved Seasonal Forecasting (AQUARIUS/MERRA)

Integrated Water Cycle Assessment (NEWS)

National Aeronautics & Space Administration

Earth Science Division
Water Resources Program Element

NASA's Water and Energy Satellites

Water Cycle Missions

ICESat
- Ice elevation
- Cloud height

GRACE
- Column water-content

TRMM and GPM
- Global precipitation

SMAP
- *Global Soil Moisture*

Water and Energy Cycle Missions

EOS-Aura
- Atmospheric humidity
- Clouds

EOS-Terra
- Snow and ice
- Vegetation

CALIPSO
- Cloud properties

CloudSAT
- Cloud profiler

EOS-Aqua
- Atmospheric humidity
- Water storage
- Clouds
- Snow and ice

Energy Cycle Missions

TOMS
- Total column ozone

SORCE
- Total Irradiance measurements

SAGE
- Air quality
- Climate change

UARS
- Carbon management
- Air quality

Planned

- **SWOT (Streamflow)**
- **SCLP (Snowpack)**
- **GRACE-II (Groundwater)**
- **HyspIRI (Water Quality, Land Surface Hydrology)**

Complementary Water and Energy Cycle Missions

QuikSCAT
- Sea-surface wind velocity

EO-1 LANDSAT and NMP EO-1
- Land cover

NPOESS
- Global environmental conditions

GOES
- Weather

Aquarius
- Global sea surface salinity

The Future...

The Soil Moisture Active Passive (SMAP) Mission

- Global observations of mapped soil moisture and freeze/thaw data with unprecedented accuracy, resolution, and coverage
- Planned Launch for 2014

The Global Precipitation Mission (GPM)

- International network of satellites that provide the next-generation global observations of rain and snow
- Planned Launch of Core Observatory for 2014

Goal: Integrating Remote Sensing Data with Modeling for Local to Global Assessment of Water Resources

Example: Land Information System (LIS)

Figure 1: Snow water equivalent (SWE) based on Terra/MODIS and Aqua/AMSR-E. Future observations will be provided by JPSS/VIIRS and DWSS/MIS.

Figure 2: Annual average precipitation from 1998 to 2009 based on TRMM satellite observations. Future observations will be provided by GPM.

Figure 3: Daily soil moisture based on Aqua/AMSR-E. Future observations will be provided by SMAP.

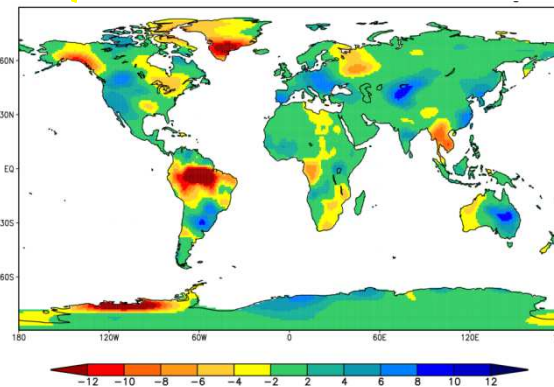

Figure 4: Changes in annual-average terrestrial water storage (the sum of groundwater, soil water, surface water, snow, and ice, as an equivalent height of water in cm) between 2009 and 2010, based on GRACE satellite observations. Future observations will be provided by GRACE-II.

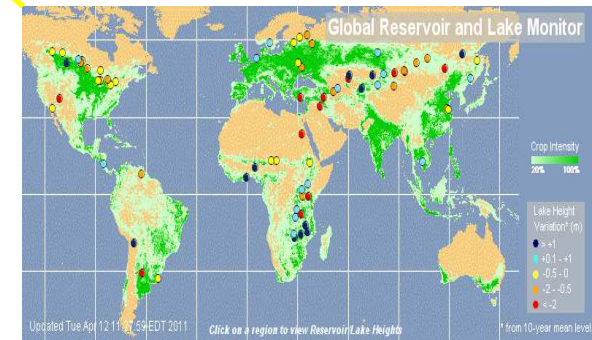

Figure 5: Current lakes and reservoirs monitored by OSTM/Jason-2. Shown are current height variations relative to 10-year average levels. Future observations will be provided by SWOT.

NASA African Water Projects

NASA Water Information System Platforms (WISP's) for the 'MENA'

***NASA Partnering with the World Bank, USAID & MENA Countries
Using Earth Observation and Modeling Data for the Sustainable
Use of Water Resources***

Mapping Vegetation
and Food Production

5 WISP's Planned for the MENA

Training and Capacity Building

- **Satellite, Modeling, Ground Based Data**
- **Integrative Environmental Systems**
- **Visualizations**
- **Decision Support Tools**
- **Informed Policy Making**
- **Training & Partnership Opportunities**

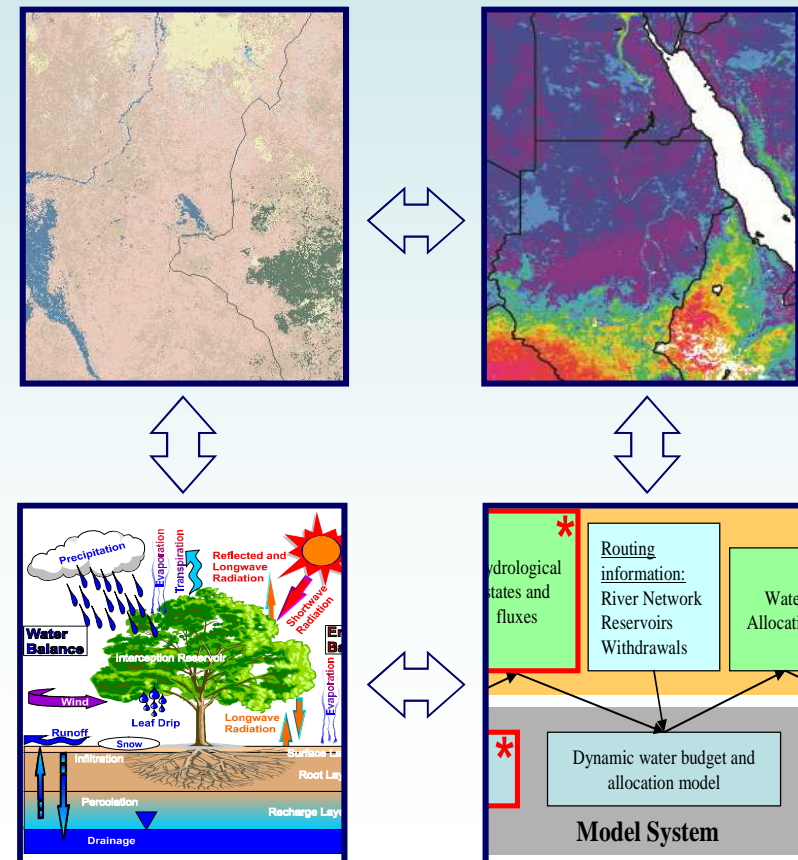

NASA Project Nile

Goal: improved hydrometeorological information for research, planning, and water management

Components:

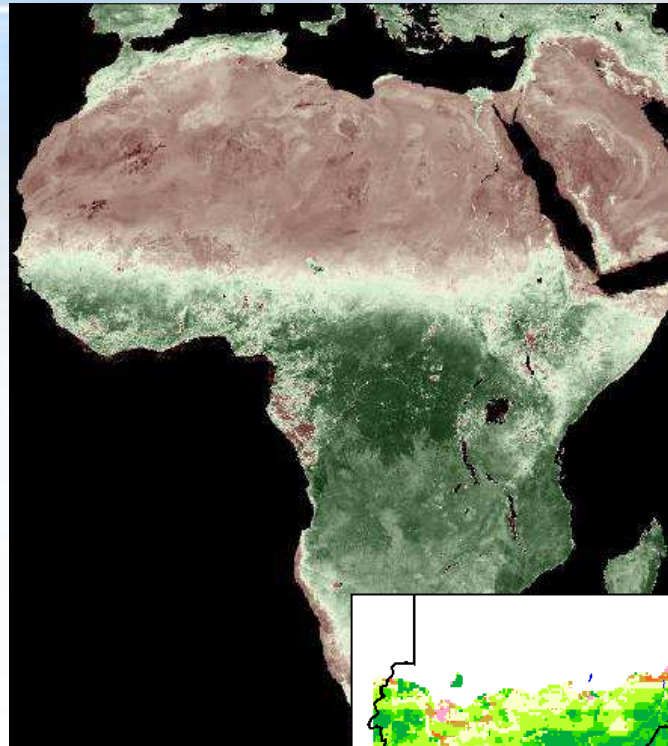

1. Land cover mapping and simulation
2. Satellite-derived evapotranspiration
3. Optimized models for hydrological analysis
4. Decision Support and Capacity Building

Famine Early Warning System Network (FEWS-NET) Satellite Assisted Data Products

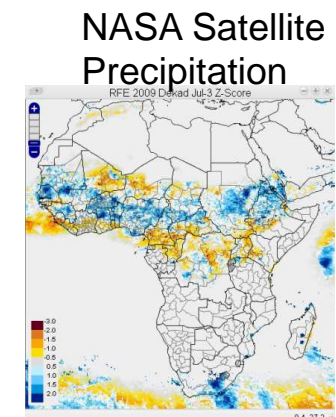

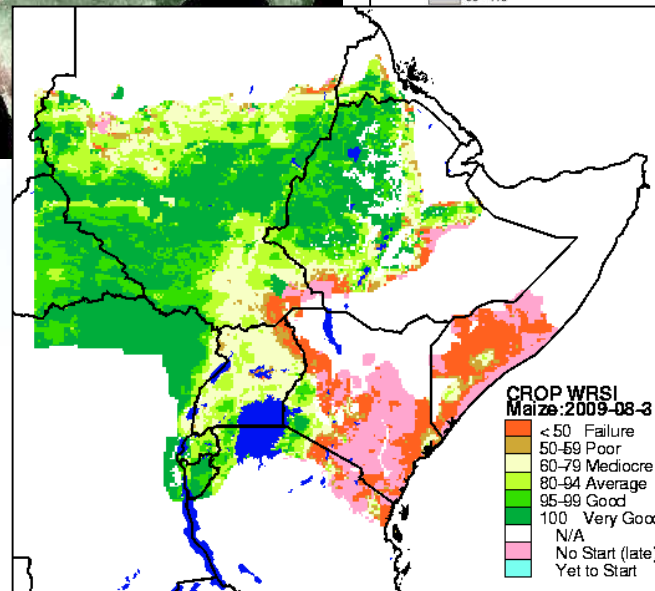

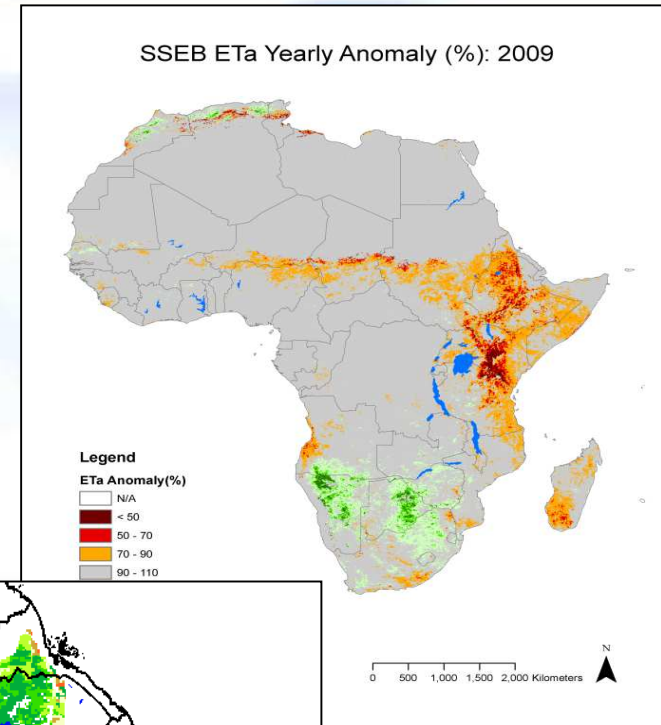

- **NASA satellite products such as from MODIS are key inputs in to FEWS-NET**
<http://earlywarning.usgs.gov/fews/africa/index.php>
- **Vegetation density ('NDVI') & precipitation**
- **Evapotranspiration or Consumptive Water Loss**
- **Modeled Food Production**

Near Real time
250m MODIS

Water Requirement
Satisfaction Index

Actual Evapotranspiration - Satellite Data

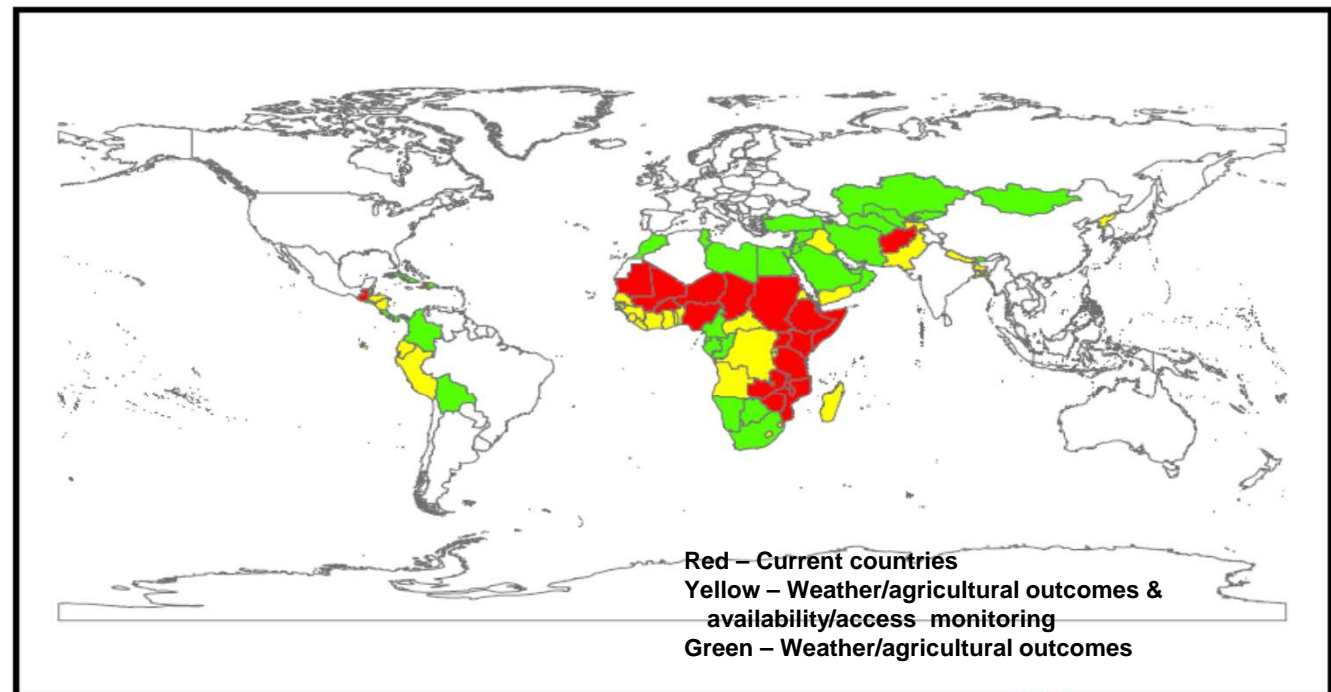

The Famine Early Warning Systems Network

(FEWS-NET)

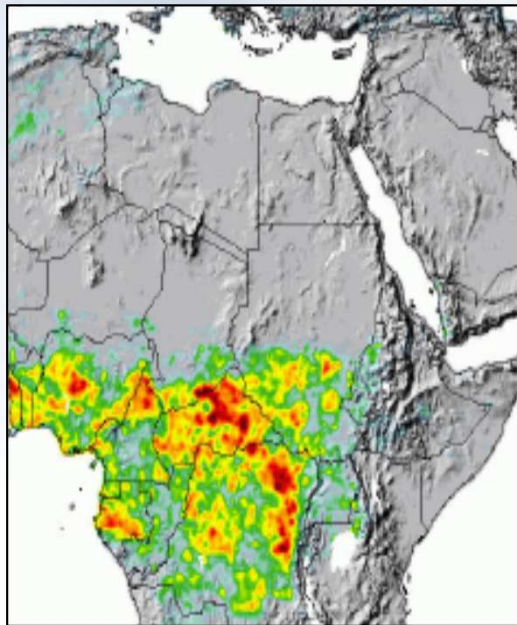

- Using NASA Land Information System (LIS) to Help Extend Coverage beyond Sub-Sahara
- Satellite Precipitation
- Satellite Snow Cover and Snow Water Equivalent
- Satellite Vegetation Greenness
- Yield Forecasting

What is 'SERVIR'

A NASA and USAID collaboration with countries and stakeholders to improve environmental management and resilience to climate change by strengthening the capacity to integrate Earth observations and geospatial technologies into development decision-making. Three international SERVIR nodes with plans for additional nodes.

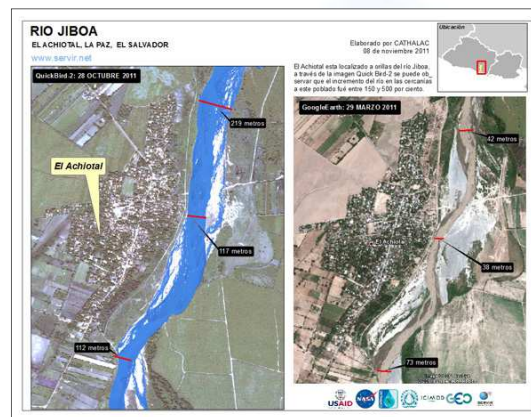

Flood Potential in Africa (NASA/GSFC)

Training and Capacity Building

- Remote Sensing Data/Models
- Integrated with other Geo Data
- Visualizations
- Decision Support
- Training/Capacity Building
- Partnerships

Flood Monitoring and Post-Disaster Assessments

SERVIR Network

Water Resources Pr

AgMIP

The Agricultural
Model Intercomparison
and Improvement Project

The Agricultural Model Intercomparison and Improvement Project (AgMIP) is a major international effort to evaluate model performance and climate impacts on the agricultural sector utilizing a cutting-edge climate, crop, and economic modeling framework enabling the assessment of future food security

- Launched in 2010, AgMIP's global activities include 5 regional research teams performing integrated assessments in Sub-Saharan Africa.
- AgMIP is building connections between the climate, hydrology, water systems, agricultural, and economics communities and plans to improve the representation of water resource challenges in future assessments.

For more information, contact Alex Ruane: alexander.c.ruane@nasa.gov

NASA Provides a Global Soil Moisture Product for the USDA Crop Forecasting System

John D. Bolten, Code 614.3, NASA GSFC

The integration of Aqua AMSR-E soil moisture estimates into the USDA Foreign Agricultural Service (FAS) crop forecasting system provides better characterization of surface wetness conditions which enables more accurate crop monitoring in key agricultural areas.

Figure 1. NASA/USDA blended soil moisture product

Hydrospheric and Biospheric Sciences Laboratory

SUMMARY & NEXT STEPS

- **NASA has a free and open exchange of its satellite data**

- + Over 40 current projects on international water activities with an estimated value of \$21M.
- + Numerous data products (e.g.'s precipitation, land cover, vegetation indices, 'LDAS', 'NPP', etc.)
- + Many products provided **in near real time** (vegetation indices, fire products & precipitation)

- **NASA has several ongoing African projects**

- + NASA/USAID African SERVIR
- + Nile Basin Remote Sensing and Modeling Project
- + NASA assisted USAID Famine Early Warning System Network (FEWS NET)
- + NASA/World Bank/USAID MENA-Water Information Systems Project
- + Greater Horn of Africa Drought Project (NASA/GSFC with USGS)
- + Several global projects (' Flooding', 'Drought', 'GLDAS', 'GLAM') may be optimized for Africa.

- **Strengthen African Partnering w/ GEO, USAID, World Bank, stakeholders, etc.**

- **Possible Next Steps with GEO and AfWCCI**

- + Coordinate Geo-Water Portal activities
- + Expand and coordinate training and public outreach efforts
- + Coordinate with GEO on African basins and countries where possible
- + African SERVIR engagement with AfWCCI activities

THANK YOU

A Summary of NASA-supported Water Activities in Africa

- **North Africa – Water Information Systems Platform (WISP)**
- **Nile Basin – Project Nile**
- **Sub-Saharan – FEWS-NET**
- **East & South Africa – SERVIR**
- **West Africa – SERVIR MyCOE**
- **Africa - AgMIP**
- **Global**
 - **Water availability**
 - **Lake & reservoir monitoring**
 - **Flooding and droughts**
 - **Water for food & ecosystems**

NASA Collaborates with the US Geological Survey through the U.S. Agency for International Development (USAID)

Famine Early Warning System – Network (FEWS –NET)

In agricultural economies, the majority of residents get some or all of their income from agricultural activity. In these regions, food security is highly related to weather-related food production deficits.

NASA satellite data and models are key input variables for organizations such as the USAID's Famine Early Warning Systems Network (FEWS NET). FEWSNET is a key resource for monitoring food aid needs and supporting food deficit countries.
